EXPERIENCE

Founding Engineer (SDE)

Mar 2024 – present | Bangalore

HealthFlex [🔗](#)

- **Designed a scalable**, database-agnostic backend leveraging serverless technologies and NoSQL, designed with a custom database abstraction layer to ensure seamless integration across multiple database providers, improving request handling time by 30%, with 120 ms average response time.
- Led the design, architecture, and development of a health-focused application from scratch, delivering two highly optimized React Native apps for performance on low-end devices with a **95% crash-free rate**.
- **Engineered a Bluetooth Low Energy (BLE)** module on React Native with multiple device connections using the TDD process with **55+ test cases**. The module parsed values at 20Hz per device using RxJS streams.
- **Optimized MongoDB Aggregate Queries**: Refactored and fine-tuned MongoDB aggregation pipelines, reducing query execution time by 70% and improving complex data retrieval efficiency by 50%.
- **Led Android and iOS app release cycles** (with 1000+ users). Implemented CI/CD pipelines for efficient release management, automating build, testing, and deployment processes reducing release cycle by 40%
- **Architected a Modular and Scalable GraphQL Backend**: Structured the backend using Domain-Driven Design (DDD) principles, for EMR System. Used GraphQL Schema Stitching for modularity and Data Loaders to optimize batch queries, reducing N+1 query problems by 85%.

App Developer Intern

Sep 2023 – Nov 2023 | Bangalore, India

EMotorad [🔗](#)

- Engineered scalable E-Bike rider assistant app in **Flutter** with Clean Architecture adhering to **SOLID** principles, integrating **BLoC** for state management, **Retrofit** with **Dio** for REST API integration, **GoRouter** for routing.
- Streamlined Bluetooth communication with E-Bike and 3 accessories, utilizing **isolates** for **multi-threaded** communication and **Background Service** to execute code in background. Applied **Singleton pattern** for resource management, improving connection stability by 90% and reducing latency by 40%.
- Integrated **Mapbox** for in-app journey planning, featuring destination search, routing from current location, and realtime rerouting if the user deviates. Achieved 70% maps cost reduction with efficient map tile caching.

Software Engineer Intern

Nov 2021 – Mar 2024

PySphere [🔗](#)

- Collaborated on the development of Career Connect, a scalable, microservices-based architecture following SOLID principles, utilizing PostgreSQL and Hibernate ORM, as part of a 10-member team.
- Developed a Payment Gateway Integration Tool supporting Stripe, JusPay, and RazorPay on Spring Boot.
- Developed a **GDPR-Compliant** User Purge Feature, including schema design and full implementation.
- Revamped PySphere's website and branding, increasing user engagement by 45%.

SKILLS

Backend: Spring, SpringBoot, NodeJs, ExpressJS, Apollo, Java, TypeScript, GraphQL, REST API, PostgreSQL, MongoDB, SQL, MQTT, Django, Python, Redis, Kafka, AWS, Google Cloud, AWS CDK, NoSQL, Apache Kafka

Frontend: Flutter, React Native, ReactJS, Expo, AngularJS, Android SDK, iOS, Shift, Dart, Kotlin, JavaScript, TypeScript, Vite, NextJS, Firebase, Figma, Redux, Bloc, Provider, Jest, Zustand, GetX, HTML, CSS, Tailwind CSS

Others:: MVC, MVVM, Clean Architecture, FLUX, SOLID, TDD, DDD, Object Oriented Design, Git, Jira, Sentry, Jenkins, CI/CD, RxJava and Unit Testing

PROJECTS

Coddy [🔗](#)

A VS Code extention that give real-time coding suggestion using Hugging Face AI Model. [Published Link](#) [🔗](#)

Tomorrow Weather [🔗](#)

A Flutter app template, built using clean architecture & SOLID Principles to showcase Low level Design.

EDUCATION

B.E. Computer Science and Engineering

2020 – 2024 | Bengaluru

AMC Engineering College

CGPA : 9.25/10
